1 – Introduction

Vagoflax is a mobile platform that connects students and companies. Companies publish job offers, and students search those offers, apply to them and follow the progress of their applications.

The application was built by a team of 4 students of the **HES-SO Valais-Wallis** as part of the Summer School 2 course. It is open source, and its code is available on GitHub at github.com/val-mon/vagoflax.

1.1 – Who this manual is for

Vagoflax has two kinds of accounts, and you choose yours when you create your account:

Student: you look for a job. You can search and filter offers, save your favorite search keywords, translate an offer into your own language, apply, and follow the status of every application you sent.

Employer: you offer jobs. You can publish, edit, hide and delete your own job offers, see the list of candidates for each of them, open their profile and accept or reject them.

Once an application has been accepted or rejected, both parties may leave a rating and a review on each other's profile.

1.2 – Before you start

The application interface is **in English only**. There is no language setting: the one translation feature in the app is the AI translation of a single job offer, described in Section 4.6. The application is also **Android-first** — it is distributed as an Android build, and this manual shows Android screenshots throughout.

Everything in this manual is illustrated with screenshots of the real application. The pink numbered pins on the screenshots (**1**, **2**, ...) match the numbered steps written next to them in the text.

2 – Installing the application

Vagoflax is distributed through **Google Play internal testing** under the package name `ch.hevs.vagoflax`. Open the invitation link you received on your Android phone or tablet, then press **1 Install**.

Figure 1 - The Vagoflax listing on the Google Play Store.

Because the build is distributed for testing, Google displays the warning “*You are downloading a test build that has not been verified. Ensure you know the developer before downloading this build to your device.*” and the title carries the mention (*unreviewed*). This is expected for a test build and does not indicate a problem with the application.

You will be asked to grant two permissions the first time they are needed:

- **Camera** — to take the photo used for face recognition, and to take a profile picture.
- **Photos and media** — to pick an existing picture from your gallery instead.

3 – Getting started

3.1 – The welcome screen

When you open Vagoflax without being logged in, you land on the welcome screen.

Figure 2 - The welcome screen.

1 Log In — you already have an account (see Section 3.3).

2 Sign Up — you are new and want to create an account (see Section 3.2).

The ⓘ icon at the top left opens the **About us** page, described in Section 6. It is available from most of the main screens of the application.

3.2 – Creating an account

Creating an account takes four screens. You cannot skip any of them: as long as your account setup is not finished, the application brings you back to the step you stopped at the next time you open it.

3.2.1 – Step 1 — E-mail and password

Figure 3 - Step 1: your credentials.

Fill in the three fields — every field marked with a red asterisk is mandatory:

- **Email:** the address you will use to log in. It must be a valid address, and it must not already be used by another Vagoflax account.
- **Password:** at least **6 characters**.
- **Confirm Password:** type the same password a second time.

Then press **2 Sign Up**. **1** is the usual back arrow.

If something is wrong, a message appears at the bottom of the screen:

Message	What to do
<i>Passwords do not match. Please try again.</i>	Retype the same password in both password fields.
<i>Please fill in both email and password fields.</i>	One of the fields is still empty.
<i>Error: The email address is already in use by another account.</i>	Use another address, or log in with this one instead.
<i>Error: Password should be at least 6 characters.</i>	Choose a longer password.

Your account is created in the authentication system as soon as this step succeeds, so that the application can immediately tell you whether the address is free. Your profile, however, is only saved at the end of step 4.

3.2.2 – Step 2 — Face recognition

Figure 4 - Step 2: registering your face.

Vagoflax can find your account from your face when you log in, which saves you from typing your e-mail address every time. To enable it, register a picture of your face now: *take a clear photo of your face, with a neutral background*.

- 1 Take a photo** — opens the camera.
- 2 Choose from gallery** — picks an existing picture instead.
- 3 Continue** — stays greyed out until a picture has been selected, then moves on to step 3.

If the photo cannot be used, an error is shown and you have to take another one:

Message	What to do
<i>No face detected. Please try again.</i>	Take the picture in better light, facing the camera.
<i>Too many faces. Please try again.</i>	Make sure you are alone in the frame.

This step has **no skip button**: a usable photo is required to continue. The picture itself is turned into a numerical signature — it is not shown to anybody, and it is not used as your profile picture.

If you choose **Choose from gallery**, the Android picker opens. Select your picture **1**, then press **2 Done**.

Figure 5 - Picking an existing photo from the Android gallery.

3.2.3 – Step 3 — Student or employer

Figure 6 - Step 3: choosing the type of account.

The question “*What are you ?*” decides what the application will look like for you, so choose carefully:

- 2 Student** — you are looking for a job.
- 2 Employer** — you want to publish job offers.
- 1** is a **logout** button: use it if you want to abandon the account creation and come back later.

The account type **cannot be changed afterwards** from within the application. If you pick the wrong one, you have to create a new account with a different e-mail address.

3.2.4 – Step 4a — Student account setup

Figure 7 - Step 4: filling in a student profile.

Tap the round avatar at the top to **add a profile picture** (optional, taken from your gallery), then fill in the five mandatory fields:

Field	Required	Notes
First name	yes	Your given name.
Last name	yes	Your family name.
Description	yes	A short presentation of yourself; employers see it on your profile.
Canton	yes	The two-letter code of your canton, e.g. ZH , GE , VD , VS .
City	yes	Used, among other things, to compute the travel time to the company.

Press **2 Finish signing up** to save everything. If a field is still empty, the message *“Please fill in all fields.”* appears. **1** goes back to the previous step.

Your **skills** and your **professional history** are not asked for here. You add them later from **Edit Profile** (Section 4.8) — and it is worth doing, because they are the first thing an employer sees when opening your profile.

3.2.5 – Step 4b – Employer account setup

9:40

← 1 Employer account setup

Add a profile picture

Company Name *

Description *

Canton (e.g., ZH, GE, VD) *

City *

Number of employees in your company *

Finish signing up

2

Figure 8 - Step 4: filling in an employer profile.

The employer form works the same way; the avatar becomes your **company logo**, which is shown on every one of your job offers.

Field	Required	Notes
Company Name	yes	Displayed on all your job offers.
Description	yes	What your company does.
Canton	yes	Two-letter code, e.g. VS . Also used by the salary prediction.
City	yes	Used for the travel-time information shown to candidates.
Number of employees in your company	yes	A whole number, strictly greater than 0 . Also used by the salary prediction.

Press **2 Finish signing up**. Your profile is then saved and the application opens on your home screen.

3.3 – Logging in

Figure 9 - The login screen.

2 Find my account with my face — takes a photo with the camera and, if it recognizes you, **fills in the e-mail field for you**. This is a convenience, not a login shortcut: you still have to type your password. If nobody matches, the message “No face recognized. Please log in with your email.” is shown.

3 Forgot Password? — opens the password reset dialog (Section 3.4).

4 Log In — signs you in and opens your home screen.

1 returns to the welcome screen.

Possible error messages:

Message	Meaning
<i>Please fill in both email and password fields.</i>	One of the two fields is empty.
<i>The email address is badly formatted.</i>	The address is not a valid e-mail address.
<i>Email or password is incorrect.</i>	No account with this address, or the wrong password.
<i>This account has been disabled.</i>	Your account was disabled by an administrator.
<i>Please check your internet connection.</i>	The phone could not reach the server.

3.4 – Resetting your password

Figure 10 - The password reset dialog.

From the login screen, press **Forgot Password?**. A dialog appears, pre-filled with whatever you already typed in the e-mail field. Check the address and press **1 Send**.

You then receive an e-mail containing a reset link. **The password is changed on the web page opened by that link, not inside the application.** Once it is done, come back to Vagoflax and log in with your new password.

The confirmation message is *“Password reset link sent! Check your inbox.”* If the address is not valid, you get *“The email address is invalid.”* instead.

For security reasons the application does not tell you whether an address is registered or not. If no e-mail arrives, check your spam folder and make sure you typed the same address you signed up with.

4 – Using Vagoflax as a student

4.1 – Finding your way around

As a student you have a floating navigation bar at the bottom of the screen with two destinations, **Jobs** and **Applications** ¹.

Figure 11 - The job search screen.

At the top of the screen you always find ² the **About us** button and ³ your **profile picture**, which opens your own profile.

The rest of the screen is the list of the job offers currently open. Each card ⁷ shows the job title, the beginning of its description and the date it was posted; tap it to open the full offer.

4.2 – Searching for a job

Type anything in the **5 Search jobs** field. The list updates as you type, and an offer is kept when your text appears **either in its title or in its description** — upper and lower case do not matter.

A few things to know about the list:

- only offers that their employer made **visible** appear here;
- the most recently posted offers come first;
- when nothing matches, the list shows “No jobs match your filters”.

4.3 – Saving your favorite searches

Typing the same keywords over and over is tedious, so Vagoflax lets you bookmark them. The bookmark button **6** at the right of the search field changes depending on what you typed:

Search field	What the button does
empty	Opens the Saved Searches list.
text that is not saved yet	Saves it — <i>Search “...” saved successfully!</i>
text that is already saved	Removes it — <i>Search “...” removed from saved searches.</i>

In the **Saved Searches** dialog, tap any entry to immediately run that search again, or use the bin icon at its right to delete it. When you have not saved anything yet, the dialog reads “You haven’t saved any searches yet.” Your saved searches are attached to your account, so you find them again on any device.

4.4 – Filtering the offers

The button at the right of the search bar **4** opens the **Filters** panel. A small badge on it shows how many filter groups are currently active.

Figure 12 - The filter panel.

- **Salary:** a slider selecting a range in Swiss francs. When an offer has no salary, its predicted salary is used instead.
- **Diplomas:** apprenticeship, bachelor, master, phd — an offer matches if it requires **at least one** of the diplomas you ticked.
- **Roles:** the seniority of the position (intern, junior, ...).
- **Industries:** the sector of the company.
- **Languages:** an offer matches if it requires **at least one** of the languages you ticked.

2 Apply filters closes the panel and refreshes the list. **3 Reset** clears everything. **1** closes the panel without changing anything.

Only the values that actually exist in the current list of offers are proposed. If no offer requires a PhD, “phd” simply does not appear in the **Diplomas** group — this is normal.

4.5 – Reading a job offer

Tapping an offer opens the **Job information** screen.

Figure 13 - A job offer seen by a student.

At the top, (3) is the **company card**: logo, name, city and canton, and the company's average rating. Tap it to open the company profile (Section 4.9).

Below it, the offer is laid out in sections:

- **Description**: the full text written by the employer.
- **Salary**: the **annual salary** announced by the company and, when available, a **predicted salary** estimated automatically by Vagoflax from the characteristics of the job. Either can read “*Not specified*” / “*Not available*”.
- **Job details**: workload in percent, contract duration (a contract of 0 month is displayed as **Indefinite**), required experience in years, industry, and the posting date.
- **Required diplomas**: the accepted diplomas, or “*No diploma specified*”.
- **Required languages**: the languages you need, or “*No language specified*”.
- **Leave & holidays**: holidays in days per year, maternity leave and paternity leave in weeks.

- **Transport:** real public-transport connections between **your city** and **the company's city**, with departure and arrival times and the trains or buses to take. If no connection is found, the section reads “*No transport option found*”.

1 goes back to the list, and 2 opens the options menu (Section 4.6).

4.5.1 – Applying

Press 4 **Apply** at the bottom of the screen. The confirmation “*Application sent!*” appears and the button becomes **Already applied**, greyed out — you can only apply once to a given offer. If it fails, the message is “*Unable to send application*”; check your connection and try again.

You may sometimes see an **amber banner** on an offer saying “*This job offer is not visible to students*” followed by “*You can only see this offer because you applied.*” It means the employer has hidden the offer since you applied — which typically happens when they accepted somebody. Your application is still there and still visible in **My applications**.

4.6 – Translating an offer

Offers are written by the employer in their own language. If you do not read it, Vagoflax can translate the offer for you.

Figure 14 - The options menu of a job offer.

- 1 Open the : menu at the top right and choose **Translate job details**.

Figure 15 - Choosing a translation language.

A dialog titled **Choose Language** lists **ORIGINAL**, **ENGLISH**, **FRENCH**, **GERMAN** and **ITALIAN**. The current choice is ticked. Pick a language and the offer is translated.

Figure 16 - A translated offer.

The title and the description are replaced by their translation, with the mention “*Translated automatically*” underneath. **1 View original** switches back to the text written by the employer at any time.

The first time a language is requested for an offer, the message “*Generating translation for french...*” is shown while the translation is produced, followed by “*Translation complete!*”. The result is then kept with the offer, so the next student asking for the same language gets it instantly.

Only the **title** and the **description** are translated. All the other fields, the labels and the rest of the application stay in English. If the translation fails, the message is “*Error translating. Please try again later. If the issue persists, contact your administrator.*”

4.7 – Following your applications

The second tab of the bottom bar **3** opens **My applications**.

Figure 17 - The list of your applications.

Each line shows the job you applied to, the date you applied and **4** a colored **status pill**. The most recent applications are at the top, and tapping a line reopens the job offer. When you have not applied anywhere yet, the screen reads “*You have not applied to any job yet*”.

Only the employer can change the status of an application; you follow it here.

Status	Meaning
SUBMITTED	Your application has been sent and is waiting to be looked at.
REVIEWING	The employer has started evaluating your application.
ACCEPTED	You got the job. The offer is automatically removed from the job board.
REJECTED	The employer did not select you for this position.

Once an application reaches **ACCEPTED** or **REJECTED**, you and that employer can rate each other (Section 4.9).

4.8 – Your profile

Tap your picture at the top right of any main screen to open your profile.

Figure 18 - Your own profile.

It gathers your average rating, your **Personal Information** (first name, last name, e-mail, city, canton, description), your **Skills**, your **History** and the **Ratings** you received.

1 goes back, **2** opens **Edit Profile**, and **3** **logs you out** immediately — there is no confirmation, so be careful with that button.

4.8.1 – Editing your profile

Figure 19 - The two halves of the Edit Profile screen.

Tap the round avatar to change your **profile picture**, then edit the fields. **First name** and **Last name** are required; **City**, **Canton** and **Description** are free text.

- **Skills:** your existing skills are shown as chips; tap the ✕ on a chip to remove one. To add one, type it in **Add a skill** and press the + button. Blank and duplicate entries are ignored.
- **History:** your past jobs are shown as chips with a ✕ to remove them. To add one, fill in **Job title**, **Company**, **Start date** and **End date** (the two buttons open a date picker), then press **Add history item**. Nothing is added as long as one of the four is missing.

Finally press **2 Save**. **1** leaves without saving.

Your **e-mail address**, your **account type** and your registered **face** cannot be changed from the application.

4.9 – Company profiles and reviews

Tapping the company card of an offer opens the company profile.

Figure 20 - A company profile seen by a student.

You see the company logo, its rating, its name, e-mail, city, canton and description, and the reviews it received. **Show All Reviews (N)** unfolds the list of reviews; **Hide Reviews** folds it back.

The button in the **Ratings** section tells you what you may do:

Button	Meaning
Leave a Review	You may rate this company — tap it.
Reviewed	You have already reviewed this company.
Cannot Review	You are not allowed to review it yet.

You can only review somebody you actually dealt with: at least one application between the two of you must have reached the status **ACCEPTED** or **REJECTED**, and you may only review the same person once.

The **Leave a Review** sheet asks for a rating from 1 to 5 stars (5 by default) and a comment (“*Share your experience with this user...*”). The comment cannot be empty — otherwise the message “*Please write a comment*” appears. Press **Submit Review** to publish it.

5 – Using Vagoflax as an employer

5.1 – Your job offers

As an employer, the home screen lists **your own** job offers — including the ones you hid.

Figure 21 - The home screen of a new employer account.

1 the **About us** button, 2 your **company profile**, 3 the **Filters** panel, 4 the **Search jobs** field, and 5 the **+** button that creates a new offer.

As long as you have not published anything, the screen reads “*No jobs available*”.

Figure 22 - Your job offers, with the action buttons of each card.

Each of your offers carries three buttons:

- 1 **View Applications** — opens the list of candidates for this offer (Section 5.4).
- 2 **Edit** — reopens the form to modify the offer.
- 3 **Delete** — removes the offer.

Tapping the card itself opens the offer as the students see it.

Delete is immediate and irreversible. There is no confirmation dialog, and deleting an offer also deletes every application that was sent to it. An offer you no longer want to receive applications for is better **hidden** than deleted — see the **Is job visible?** switch below.

An offer that is currently hidden is marked with a crossed-out eye icon on its card.

5.2 – Creating or editing an offer

The **+** button opens the **Add Job** form. The same form, pre-filled, is used when you edit an existing offer; only the button at the bottom changes to **Update Job**.

Figure 23 - The two halves of the job creation form.

Field	Required	Default	Rules
Job Title	yes	—	Cannot be empty.
Job Description	no	—	Free text on several lines.
Role	yes	intern	Seniority of the position, chosen from a list.
Industry	yes	informationTechnology	Sector of the position, chosen from a list.
Diplomas	no	none	Tap the chips to select several.
Perks	no	none	Tap the chips to select several.
Languages	no	none	Tap the chips to select several.
Minimum years of experience	no	0	Whole number, 0 or more.

Field	Required	Default	Rules
Maximum years of experience	no	0	Whole number, and greater than or equal to the minimum.
Contract time (months)	no	0	Whole number. 0 means an indefinite contract.
Holidays (days)	no	20	Whole number of days per year.
Maternity leave (weeks)	no	14	Whole number of weeks.
Paternity leave (weeks)	no	2	Whole number of weeks.
Workload (%)	yes	100	Between 1 and 100.
Is job visible?	—	on	See below.

3 Is job visible? controls whether the offer appears in the students’ search results. Turn it off to keep an offer as a draft, or to stop receiving applications without deleting the offer and its candidates.

Press **1 Create Job** to publish. **2** leaves the form.

If a field is not valid, a message appears under it — “*This field is required*”, “*Enter a whole number*”, “*Enter a positive value*”, “*Enter a value between 1 and 100*” or “*Maximum must be greater than or equal to minimum*”.

When you save, Vagoflax estimates a **predicted salary** for the position from the data you entered plus your canton and your company size. This is why your company profile must be complete: if the estimation cannot be computed, the offer is not saved and the message “*Salary prediction failed: ...*” or “*Unable to load the employer profile.*” is displayed.

5.3 – Searching and viewing your offers

The search field and the **Filters** panel work exactly like on the student side, except that they only search among **your own** offers.

Figure 24 - The filter panel on the employer side.

2 Apply filters, **3 Reset**, **1** closes the panel.

Opening one of your offers shows it exactly as a student sees it, which is a good way to check your text before publishing it.

Figure 25 - One of your offers, seen from the employer account.

1 goes back, 2 opens the translation menu, and 3 opens your own company profile. The button at the bottom reads **Only students can apply** and is disabled, since an employer cannot apply to a job.

5.4 – Reviewing your candidates

The **View Applications** button of an offer opens the **Candidates** screen, whose subtitle recalls which offer you are looking at.

Figure 26 - The candidates of one job offer.

Candidates are sorted alphabetically by first name. Each card shows the picture, the name, the date the application was sent, and **3** the current status. **2** opens the candidate’s profile. **1** goes back to your offers. When nobody applied yet, the screen reads “No applications yet”.

5.4.1 – Changing the status of an application

Tap the status pill of a candidate to open the **Update Application Status** dialog.

Figure 27 - Changing the status of an application.

The current status is displayed in color with a ✓ and cannot be tapped. Choose one of the other three:

- **Reviewing:** tell the candidate that you started evaluating their application.
- **Accept:** you hire this candidate.
- **Reject:** you do not select this candidate.

The confirmation “*Status updated to ...*” appears, and the candidate immediately sees the new status in their **My applications** screen.

Accepting a candidate automatically hides the offer. A dialog titled **Job Hidden** explains that “*The job has been hidden from the job board since you accepted a candidate. You can make it visible again in the job’s settings.*” To publish it again, edit the offer and turn the **Is job visible?** switch back on.

Once an application is **accepted** or **rejected**, you and that student can rate each other from your respective profiles.

5.5 – Looking at a candidate’s profile

Tapping a candidate opens their profile.

Figure 28 - A student profile seen by an employer.

You see their picture and rating, their **Personal Information** (first name, last name, e-mail, city, canton, description), their **Skills**, their **History** — each entry being a job title, a company and the years — and the **Ratings** they received from other employers. The **Leave a Review** button follows the same rules as on the student side (Section 4.9). **1** goes back to the candidate list.

5.6 – Your company profile

Your profile is reached from your logo at the top right of the home screen; the pencil icon opens **Edit Profile**.

9:43

← Edit Profile

2

3

Company name

OIKEN

City

Sion

Canton

VS

Description

Energy, water, and multimedia infrastructure provider in Central Valais.

Company size

500

Save 1

Figure 29 - Editing a company profile.

3 Tap the avatar to change your **company logo** — it is shown on every offer you publish and on every candidate’s screen. Then edit **Company name** (required), **City**, **Canton**, **Description** and **Company size**.

1 **Save** stores the changes; 2 leaves without saving.

Keep **Canton** and **Company size** accurate: they are two of the inputs of the salary prediction that runs whenever you create or update a job offer.

6 – About and support

The ⓘ button, available on the welcome screen and on every main screen, opens the **About us** page.

Figure 30 - The About us page.

It presents the project and gives the link to the public repository, github.com/val-mon/vagoflax, where you can read the code and report a problem. ⓘ goes back to the previous screen.
